Preface	xviii	Appendix: The construction of real GDP and chain-type indexes	44
Introduction	1		
Chapter 1	2	THE CORE	46
A Tour of the World		THE SHORT RUN	47
1.1 The crisis	3		
1.2 Australia	6	Chapter 3	48
1.3 The United States	10	The Goods Market	
Should you worry about the US fiscal deficit?	11	3.1 The composition of GDP	49
1.4 The Euro area	12	3.2 The demand for goods	50
How can European unemployment be reduced?	14	Consumption (C)	51
What has the Euro done for its members?	14	Investment (I)	52
1.5 China	15	Government spending (G)	53
1.6 Looking ahead	17	3.3 The determination of equilibrium output	53
Appendix: Where to find the numbers?	20	Using algebra	54
		Using a graph	55
		Using words	57
		How long does it take for output to adjust?	57
		3.4 Investment equals saving: An alternative way of thinking about goods–market equilibrium	61
		3.5 Is the government omnipotent? A warning	63
Chapter 2	23	Chapter 4	69
A Tour of the Book		Financial Markets	
2.1 Aggregate output	23	4.1 The demand for money	69
GDP: Production and income	24	Deriving the demand for money	71
Nominal and real GDP	25	4.2 Determining the interest rate: I	73
GDP: Level versus growth rate	27	Money demand, money supply and the equilibrium interest rate	73
2.2 The unemployment rate	29	Monetary policy and open market operations	76
Why do economists care about unemployment?	30	Bond prices and bond yields	76
2.3 The inflation rate	32	Choosing money or choosing the interest rate?	77
The GDP deflator	32	Money, bonds and other assets	78
The consumer price index	33	4.3 Determining the interest rate: II	78
Why do economists care about inflation?	34	What banks do	78
2.4 Output, unemployment and the inflation rate: Okun’s law and the Phillips curve	35	The supply of and demand for central bank money	81
Okun’s law	35	The demand for money	81
The Phillips curve	36	The demand for reserves	82
2.5 The short run, the medium run, the long run	37	The demand for central bank money	82
2.6 A tour of the book	38	The determination of the interest rate	83
The core	38		
Extensions	39		
Back to policy	39		
Epilogue	39		

4.4	Two alternative ways of looking at the equilibrium	83	6.4	Price determination	132
	The interbank cash market and the cash rate	84	6.5	The natural rate of unemployment	133
	The supply of money, the demand for money and the money multiplier	85		The wage-setting relation	133
	Understanding the money multiplier	85		The price-setting relation	134
				Equilibrium real wages and unemployment	134
				From unemployment to employment	135
				From employment to output	136
			6.6	Tax distortions and the natural rate of unemployment	137
			6.7	Where we go from here	139
				Appendix: Wage- and price-setting relations versus labour supply and labour demand	144
Chapter 5		91	Chapter 7		147
Goods and Financial Markets: The IS–LM Model			Putting All Markets Together: The AS–AD Model		
5.1	The goods market and the <i>IS</i> relation	91	7.1	Aggregate supply	148
	Investment, sales and the interest rate	92	7.2	Aggregate demand	150
	Determining output	92		Deriving the <i>AD</i> curve with a fixed money stock	151
	Deriving the <i>IS</i> curve	94		Deriving the <i>AD</i> curve with an interest rate rule	153
	Shifts of the <i>IS</i> curve	95	7.3	Equilibrium in the short run and in the medium run	155
5.2	Financial markets and the <i>LM</i> relation	96		Equilibrium in the short run	155
	Real money, real income and the interest rate	96		From the short run to the medium run	156
	Deriving the <i>LM</i> curve	96	7.4	The effects of a monetary policy expansion	158
	Shifts of the <i>LM</i> curve	97		The dynamics of adjustment	158
5.3	Putting the <i>IS</i> and the <i>LM</i> relations together	98		Going behind the scenes	159
	Fiscal policy, activity and the interest rate	99		The neutrality of money	160
	Monetary policy, activity and the interest rate	102	7.5	A decrease in the budget deficit	162
5.4	Using a policy mix	104		Deficit reduction, output and the interest rate	164
5.5	How does the <i>IS–LM</i> model fit the facts?	109		Budget deficits, output and investment	164
	Appendix: An alternative derivation of the <i>LM</i> relation as an interest rate rule	116	7.6	An increase in the price of oil	166
				Effects on the natural rate of unemployment	167
				The dynamics of adjustment	168
			7.7	Conclusions	171
				The short run versus the medium run	172
				Shocks and propagation mechanisms	172
				Where we go from here	173
THE MEDIUM RUN		119			
Chapter 6		120			
The Labour Market					
6.1	A tour of the labour market	120			
	The large flows of workers	121			
6.2	Movements in unemployment	125			
6.3	Wage determination	127			
	Bargaining	129			
	Efficiency wages	129			
	Wages, prices and unemployment	131			
	The expected price level	131			
	The unemployment rate	131			
	The other factors	131			

Chapter 8	179	THE LONG RUN	225
The Phillips Curve, the Natural Rate of Unemployment and Inflation		Chapter 10	226
		The Facts of Growth	
8.1 Inflation, expected inflation and unemployment	180	10.1 Measuring the standard of living	227
8.2 The Phillips curve	181	10.2 Growth in rich countries since 1950	231
The early incarnation	181	The large increase in the standard of living since 1950	232
Mutations	182	The convergence of output per person	232
The Phillips curve and the natural rate of unemployment	187	10.3 A broader look across time and space	234
The neutrality of money, revisited	189	Looking across two millennia	234
8.3 A Summary and many warnings	190	Looking across countries	234
Variations in the natural rate across countries	190	10.4 Thinking about growth: A primer	236
Variations in the natural rate over time	192	The aggregate production function	236
Disinflation, credibility and unemployment	194	Returns to scale and returns to factors	237
High inflation and the Phillips curve relation	196	Output per worker and capital per worker	237
Deflation and the Phillips curve relation	197	The sources of growth	238
Appendix: From the aggregate supply relation to a relation between inflation, expected inflation and unemployment	202	Chapter 11	244
		Saving, Capital Accumulation and Output	
Chapter 9	203	11.1 Interactions between output and capital	244
The Crisis		The effects of capital on output	245
9.1 From a housing problem to a financial crisis	203	The effects of output on capital accumulation	246
Housing prices and subprime mortgages	204	Output and investment	246
The role of banks	205	Investment and capital accumulation	247
Leverage	206	11.2 The implications of alternative saving rates	247
Complexity	207	Dynamics of capital and output	248
Liquidity	208	Steady-state capital and output	250
Amplification mechanisms	208	The saving rate and output	251
9.2 The use and limits of policy	208	The saving rate and consumption	253
Initial policy responses	210	11.3 Getting a sense of magnitudes	257
The limits of monetary policy:		The effects of the saving rate on steady-state output	257
The liquidity trap	212	The dynamic effects of an increase in the saving rate	258
The limits of fiscal policy: High debt	215	The saving rate and the golden rule	259
9.3 The slow recovery	216	11.4 Physical versus human capital	261
Why is the US recovery so slow?	217	Extending the production function	261
		Human capital, physical capital, and output	262
		Endogenous growth	263
		Appendix: The Cobb–Douglas production function and the steady state	266

Chapter 12	269	EXTENSIONS	310
Technological Progress and Growth		EXPECTATIONS	311
12.1 Technological progress and the rate of growth	269	Chapter 14	312
Technological progress and the production function	269	Expectations: The Basic Tools	
Interactions between output and capital	271	14.1 Nominal versus real interest rates	312
Dynamics of capital and output	273	Nominal and real interest rates in Australia since 1978	315
The effects of the saving rate	274	14.2 Nominal and real interest rates, and the <i>IS–LM</i> Model	319
12.2 The determinants of technological progress	275	14.3 Money growth, inflation, nominal and real interest rates	320
The fertility of the research process	277	Revisiting the <i>IS–LM</i> model	320
The appropriability of research results	278	Nominal and real interest rates in the short run	320
12.3 The facts of growth revisited	279	Nominal and real interest rates in the medium run	322
Capital accumulation versus technological progress in rich countries since 1985	279	From the short run to the medium run	323
Capital accumulation versus technological progress in China	281	Evidence on the Fisher hypothesis	324
Appendix: Constructing a measure of technological progress	286	14.4 Expected present discounted values	327
		Computing expected present discounted values	327
		A general formula	328
		Using present values: Examples	328
		Constant interest rates	329
		Constant interest rates and payments	329
		Constant interest rates and payments, forever	329
		Zero interest rates	330
		Nominal versus real interest rates, and present values	330
		Appendix: Deriving the expected present discounted value using real or nominal interest rates	334
Chapter 13	288	Chapter 15	336
Technological Progress: The Short, the Medium and the Long Run		Financial Markets and Expectations	
13.1 Productivity, output and unemployment in the short run	288	15.1 Bond prices and bond yields	336
Technological progress, aggregate supply and aggregate demand	289	Bond prices as present values	339
The empirical evidence	291	Arbitrage and bond prices	339
13.2 Productivity and the natural rate of unemployment	292	From bond prices to bond yields	340
Price setting and wage setting revisited	293	Interpreting the yield curve	341
The natural rate of unemployment	293	The yield curve and economic activity	342
The empirical evidence	295		
13.3 Technological progress, churning and distribution effects	298		
The increase in wage inequality	300		
The causes of increased wage inequality	301		
13.4 Institutions, technological progress and growth	303		

15.2 The stock market and movements in stock prices	344	From the short nominal rate to current and expected real rates	385
Stock prices as present values	345	Monetary policy revisited	386
The stock market and economic activity	347	17.3 Deficit reduction, expectations and output	391
A monetary expansion and the stock market	348	The role of expectations about the future	392
An increase in consumer spending and the stock market	348	Back to the current period	392
15.3 Risk, bubbles, fads and asset prices	351		
Stock prices and risk	351	THE OPEN ECONOMY	401
Asset prices, fundamentals and bubbles	351	Chapter 18	402
House prices and housing finance	353	Openness in Goods and Financial Markets	
Chapter 16	360	18.1 Openness in goods markets	403
Expectations, Consumption and Investment		Exports and imports	403
16.1 Consumption	360	The choice between domestic goods and foreign goods	406
The very foresighted consumer	361	Nominal exchange rates	406
An example	362	From nominal to real exchange rates	408
Towards a more realistic description	363	From bilateral to multilateral exchange rates	410
Putting things together: Current income, expectations and consumption	365	18.2 Openness in financial markets	412
16.2 Investment	367	The balance of payments	412
Investment and expectations of profit	367	The current account	412
Depreciation	367	The capital account	413
The present value of expected profits	367	The choice between domestic and foreign assets	416
The investment decision	368	Interest rates and exchange rates	417
A convenient special case	370	18.3 Conclusions and a look ahead	419
Current versus expected profit	371		
Profit and sales	373	Chapter 19	425
16.3 The volatility of consumption and investment	374	The Goods Market in an Open Economy	
Appendix: Derivation of the expected present value of profits under static expectations	380	19.1 The <i>IS</i> relation in the open economy	425
Chapter 17	381	The demand for domestic goods	425
Expectations, Output and Policy		The determinants of <i>C</i> , <i>I</i> and <i>G</i>	426
17.1 Expectations and decisions: Taking stock	381	The determinants of imports	426
Expectations, consumption and investment decisions	381	The determinants of exports	427
Expectations and the <i>IS</i> relation	382	Putting the components together	427
The <i>LM</i> relation revisited	385	19.2 Equilibrium output and the trade balance	428
17.2 Monetary policy, expectations and output	385	19.3 Increases in demand, domestic or foreign	429
		Increases in domestic demand	429
		Increases in foreign demand	431
		Fiscal policy revisited	432

19.4 Depreciation, the trade balance and output	434	21.2 Exchange rate crises under fixed exchange rates	477
Depreciation and the trade balance:		21.3 Exchange rate movements under flexible exchange rates	481
The Marshall–Lerner condition	434	Exchange rates and the current account	482
The effects of a depreciation	435	Exchange rates, and current and future interest rates	482
Combining exchange rate and fiscal policies	435	Exchange rate volatility	483
19.5 Looking at dynamics: The J-curve	437	Overshooting exchange rates	484
19.6 Saving, investment and the current account balance	439	Short-run and medium-run equilibrium under flexible exchange rates	486
Appendix: Derivation of the Marshall–Lerner condition	447	Monetary policy contraction—the medium run	486
Chapter 20	448	Monetary policy contraction—from the short run to the medium run	488
Output, the Interest Rate and the Exchange Rate		Rational or adaptive expectations	490
20.1 Equilibrium in the goods market	448	A permanent fiscal shock	490
20.2 Equilibrium in financial markets	449	21.4 Choosing between exchange rate regimes	490
Money versus bonds	450	Common currency areas	491
Domestic bonds versus foreign bonds	450	Hard pegs, currency boards and dollarisation	493
20.3 Putting goods and financial markets together	454	Appendix 1: Deriving aggregate demand under fixed exchange rates	501
20.4 The effects of policy in an open economy	456	Appendix 2: The real exchange rate, and domestic and foreign real interest rates	502
The effects of fiscal policy in an open economy	456	BACK TO POLICY	505
The effects of monetary policy in an open economy	458	Chapter 22	506
20.5 Fixed exchange rates	460	Should Policy-makers Be Restrained?	
Pegs, crawling pegs, bands, the EMS and the euro	460	22.1 Uncertainty and policy	507
Pegging the exchange rate and monetary control	461	How much do macroeconomists actually know?	507
Fiscal policy under fixed exchange rates	462	Should uncertainty lead policy-makers to do less?	509
Appendix 1: Exchange rates, interest rates and capital substitutability	467	Uncertainty and restraints on policy-makers	510
Appendix 2: Fixed exchange rates, interest rates and capital mobility	468	22.2 Expectations and policy	511
Chapter 21	471	Hostage takings and negotiations	511
Exchange Rate Regimes		Inflation and unemployment revisited	512
21.1 The medium run	472	Establishing credibility	513
Aggregate demand under fixed exchange rates	472	Time consistency and restraints on policy-makers	514
Equilibrium in the short run and in the medium run	473		
The case for and against a devaluation	475		

22.3 Politics and policy	515	The option of negative real interest rates	556
Games between policy-makers and voters	515	Money illusion revisited	557
Games between policy-makers	517	The optimal inflation rate: The current debate	557
Politics and fiscal restraints	518		
Chapter 23	526	24.3 The design of monetary policy	557
Fiscal Policy: A Summing Up		Money growth targets and target ranges	558
23.1 What you have learned	526	Money growth and inflation revisited	558
23.2 The government budget constraint: deficits, debt, spending and taxes	527	Inflation targeting	560
The arithmetic of deficits and debt	527	Interest rate rules	561
Current versus future taxes	530	24.4 Challenges from the crisis	562
Full repayment in year 2	530	The liquidity trap	563
Full repayment in year t	530	Avoiding falling into the trap	563
Debt stabilisation in year t	532	Getting out of the trap	563
The evolution of the debt-to-GDP ratio	533	Dealing with the trap	563
23.3 Ricardian equivalence, cyclical adjusted deficits and war finance	535	Macro prudential regulation	564
Ricardian equivalence	535	Appendix: The Reserve Bank of Australia in action	570
Deficits, output stabilisation and the cyclically adjusted deficit	536		
Wars and deficits	537	EPILOGUE	574
Passing on the burden of the war	537	Chapter 25	575
Reducing tax distortions by tax smoothing	538	Epilogue: The Story of Macroeconomics	
23.4 The dangers of high debt	538	25.1 Keynes and the Great Depression	575
High debt, default risk and vicious cycles	539	25.2 The neoclassical synthesis	576
Debt default	543	Progress on all fronts	576
Money finance	543	The <i>IS-LM</i> model	576
		Theories of consumption, investment and money demand	576
Chapter 24	550	Growth theory	577
Monetary Policy: A Summing Up		Macroeconometric models	577
24.1 What we have learned	551	Keynesians versus monetarists	577
24.2 The optimal inflation rate	552	Monetary policy versus fiscal policy	577
The costs of inflation	552	The Phillips curve	578
Shoe-leather costs	552	The role of policy	578
Tax distortions	553	25.3 The rational expectations critique	578
Money illusion	554	The three implications of rational expectations	579
Inflation variability	555	The Lucas critique	579
The benefits of inflation	556	Rational expectations and the Phillips curve	579
Seignorage	556	Optimal control versus game theory	580
		The integration of rational expectations	580

The implications of rational expectations	580	Appendices	588
Wage and price setting	580	Appendix 1 An Introduction to National	
The theory of policy	581	Income and Product Accounts	589
25.4 Recent developments up to the crisis	581	Appendix 2 A Maths Refresher	597
New classical economics and real		Appendix 3 An Introduction to	
business cycle theory	581	Econometrics	603
New Keynesian economics	582	Glossary	608
New growth theory	583	Index	627
Towards an integration	583	List of Symbols	637
25.5 First lessons from the crisis	584
