Preface xxii
About the authors xxv

Chapter 1 Number, Algebra and Geometry 1

1.1 Introduction 2

1.2 Number and arithmetic 2

1.2.1 Number line 2
1.2.2 Representation of numbers 3
1.2.3 Rules of arithmetic 5
1.2.4 Exercises (1–9) 9
1.2.5 Inequalities 10
1.2.6 Modulus and intervals 11
1.2.7 Exercises (10–14) 13

1.3 Algebra 14

1.3.1 Algebraic manipulation 15
1.3.2 Exercises (15–20) 22
1.3.3 Equations, inequalities and identities 23
1.3.4 Exercises (21–32) 30
1.3.5 Suffix and sigma notation 30
1.3.6 Factorial notation and the binomial expansion 32
1.3.7 Exercises (33–35) 35

1.4 Geometry 36

1.4.1 Coordinates 36
1.4.2 Straight lines 36
1.4.3 Circles 38
1.4.4 Exercises (36–43) 41
1.4.5 Conics 41
1.4.6 Exercises (44–46) 47

1.5	Number and accuracy	47
	1.5.1 Rounding, decimal places and significant figures	47
	1.5.2 Estimating the effect of rounding errors	49
	1.5.3 Exercises (47–56)	54
	1.5.4 Computer arithmetic	55
	1.5.5 Exercises (57–59)	56
1.6	Engineering applications	57
1.7	Review exercises (1–25)	59
Chapter 2	**Functions**	**63**
2.1	Introduction	64
2.2	Basic definitions	64
	2.2.1 Concept of a function	64
	2.2.2 Exercises (1–6)	73
	2.2.3 Inverse functions	74
	2.2.4 Composite functions	78
	2.2.5 Exercises (7–13)	81
	2.2.6 Odd, even and periodic functions	82
	2.2.7 Exercises (14–16)	87
2.3	Linear and quadratic functions	87
	2.3.1 Linear functions	87
	2.3.2 Least squares fit of a linear function to experimental data	89
	2.3.3 Exercises (17–23)	92
	2.3.4 The quadratic function	93
	2.3.5 Exercises (24–29)	96
2.4	Polynomial functions	97
	2.4.1 Basic properties	98
	2.4.2 Factorization	99
	2.4.3 Nested multiplication and synthetic division	101
	2.4.4 Roots of polynomial equations	104
	2.4.5 Exercises (30–38)	111
2.5	Rational functions	113
	2.5.1 Partial fractions	114
	2.5.2 Exercises (39–42)	120
	2.5.3 Asymptotes	121
	2.5.4 Parametric representation	124
	2.5.5 Exercises (43–47)	126

2.6 Circular functions 126

2.6.1 Trigonometric ratios 127
2.6.2 Exercises (48–54) 129
2.6.3 Circular functions 130
2.6.4 Trigonometric identities 136
2.6.5 Amplitude and phase 140
2.6.6 Exercises (55–66) 143
2.6.7 Inverse circular (trigonometric) functions 144
2.6.8 Polar coordinates 146
2.6.9 Exercises (67–71) 149

2.7 Exponential, logarithmic and hyperbolic functions 150

2.7.1 Exponential functions 150
2.7.2 Logarithmic functions 153
2.7.3 Exercises (72–80) 155
2.7.4 Hyperbolic functions 155
2.7.5 Inverse hyperbolic functions 160
2.7.6 Exercises (81–88) 162

2.8 Irrational functions 162

2.8.1 Algebraic functions 163
2.8.2 Implicit functions 164
2.8.3 Piecewise defined functions 168
2.8.4 Exercises (89–98) 170

2.9 Numerical evaluation of functions 171

2.9.1 Tabulated functions and interpolation 172
2.9.2 Exercises (99–104) 176

2.10 Engineering application: a design problem 177

2.11 Engineering application: an optimization problem 179

2.12 Review exercises (1–23) 180

Chapter 3 Complex Numbers 183

3.1 Introduction 184

3.2 Properties 185

3.2.1 The Argand diagram 185
3.2.2 The arithmetic of complex numbers 186
3.2.3 Complex conjugate 189
3.2.4 Modulus and argument 190

3.2.5 Exercises (1–18) 194
3.2.6 Polar form of a complex number 195
3.2.7 Euler's formula 200
3.2.8 Exercises (19–27) 201
3.2.9 Relationship between circular and hyperbolic functions 202
3.2.10 Logarithm of a complex number 206
3.2.11 Exercises (28–33) 207

3.3 Powers of complex numbers 208

3.3.1 De Moivre's theorem 208
3.3.2 Powers of trigonometric functions and multiple angles 212
3.3.3 Exercises (34–41) 215

3.4 Loci in the complex plane 216

3.4.1 Straight lines 216
3.4.2 Circles 217
3.4.3 More general loci 219
3.4.4 Exercises (42–50) 220

3.5 Functions of a complex variable 221

3.5.1 Exercises (51–56) 223

3.6 Engineering application: alternating currents in electrical networks 223

3.6.1 Exercises (57–58) 225

3.7 Review exercises (1–34) 226

Chapter 4 Vector Algebra 229

4.1 Introduction 230

4.2 Basic definitions and results 231

4.2.1 Cartesian coordinates 231
4.2.2 Scalars and vectors 233
4.2.3 Addition of vectors 235
4.2.4 Exercises (1–10) 241
4.2.5 Cartesian components and basic properties 242
4.2.6 Complex numbers as vectors 248
4.2.7 Exercises (11–26) 250
4.2.8 The scalar product 251
4.2.9 Exercises (27–40) 258
4.2.10 The vector product 259
4.2.11 Exercises (41–56) 269

4.2.12 Triple products 270
4.2.13 Exercises (57–65) 276

4.3 The vector treatment of the geometry of lines and planes 277

4.3.1 Vector equation of a line 277
4.3.2 Exercises (66–72) 284
4.3.3 Vector equation of a plane 284
4.3.4 Exercises (73–83) 288

4.4 Engineering application: spin-dryer suspension 289

4.4.1 Point-particle model 289

4.5 Engineering application: cable-stayed bridge 291

4.5.1 A simple stayed bridge 292

4.6 Review exercises (1–22) 293

Chapter 5 Matrix Algebra 296

5.1 Introduction 297

5.2 Basic concepts, definitions and properties 298

5.2.1 Definitions 301
5.2.2 Basic operations of matrices 304
5.2.3 Exercises (1–11) 309
5.2.4 Matrix multiplication 310
5.2.5 Exercises (12–18) 315
5.2.6 Properties of matrix multiplication 316
5.2.7 Exercises (19–33) 325

5.3 Determinants 327

5.3.1 Exercises (34–50) 338

5.4 The inverse matrix 339

5.4.1 Exercises (51–59) 343

5.5 Linear equations 345

5.5.1 Exercises (60–71) 352
5.5.2 The solution of linear equations: elimination methods 354
5.5.3 Exercises (72–78) 368
5.5.4 The solution of linear equations: iterative methods 370
5.5.5 Exercises (79–84) 375

5.6	Rank	376
	5.6.1 Exercises (85–93)	386
5.7	The eigenvalue problem	387
	5.7.1 The characteristic equation	388
	5.7.2 Eigenvalues and eigenvectors	389
	5.7.3 Exercises (94–95)	397
	5.7.4 Repeated eigenvalues	397
	5.7.5 Exercises (96–101)	402
	5.7.6 Some useful properties of eigenvalues	402
	5.7.7 Symmetric matrices	404
	5.7.8 Exercises (102–106)	407
5.8	Engineering application: spring systems	408
	5.8.1 A two-particle system	408
	5.8.2 An *n*-particle system	409
5.9	Engineering application: steady heat transfer through composite materials	411
	5.9.1 Introduction	411
	5.9.2 Heat conduction	412
	5.9.3 The three-layer situation	412
	5.9.4 Many-layer situation	414
5.10	Review exercises (1–26)	415

Chapter 6 An Introduction to Discrete Mathematics 421

6.1	Introduction	422
6.2	Set theory	422
	6.2.1 Definitions and notation	423
	6.2.2 Union and intersection	424
	6.2.3 Exercises (1–8)	426
	6.2.4 Algebra of sets	426
	6.2.5 Exercises (9–17)	431
6.3	Switching and logic circuits	433
	6.3.1 Switching circuits	433
	6.3.2 Algebra of switching circuits	434
	6.3.3 Exercises (18–29)	440
	6.3.4 Logic circuits	441
	6.3.5 Exercises (30–31)	445

6.4 Propositional logic and methods of proof 446
6.4.1 Propositions 446
6.4.2 Compound propositions 448
6.4.3 Algebra of statements 451
6.4.4 Exercises (32–37) 454
6.4.5 Implications and proofs 454
6.4.6 Exercises (38–47) 460

6.5 Engineering application: decision support 461

6.6 Engineering application: control 463

6.7 Review exercises (1–23) 466

Chapter 7 Sequences, Series and Limits 470

7.1 Introduction 471

7.2 Sequences and series 471
7.2.1 Notation 471
7.2.2 Graphical representation of sequences 473
7.2.3 Exercises (1–13) 476

7.3 Finite sequences and series 478
7.3.1 Arithmetical sequences and series 478
7.3.2 Geometric sequences and series 479
7.3.3 Other finite series 481
7.3.4 Exercises (14–25) 484

7.4 Recurrence relations 485
7.4.1 First-order linear recurrence relations with constant coefficients 486
7.4.2 Exercises (26–28) 490
7.4.3 Second-order linear recurrence relations with constant coefficients 490
7.4.4 Exercises (29–35) 497

7.5 Limit of a sequence 498
7.5.1 Convergent sequences 498
7.5.2 Properties of convergent sequences 501
7.5.3 Computation of limits 503
7.5.4 Exercises (36–40) 505

7.6	Infinite series	506
	7.6.1 Convergence of infinite series	506
	7.6.2 Tests for convergence of positive series	508
	7.6.3 The absolute convergence of general series	511
	7.6.4 Exercises (41–49)	512
7.7	Power series	513
	7.7.1 Convergence of power series	513
	7.7.2 Special power series	515
	7.7.3 Exercises (50–56)	521
7.8	Functions of a real variable	522
	7.8.1 Limit of a function of a real variable	522
	7.8.2 One-sided limits	526
	7.8.3 Exercises (57–61)	528
7.9	Continuity of functions of a real variable	529
	7.9.1 Properties of continuous functions	529
	7.9.2 Continuous and discontinuous functions	531
	7.9.3 Numerical location of zeros	533
	7.9.4 Exercises (62–69)	536
7.10	Engineering application: insulator chain	536
7.11	Engineering application: approximating functions and Padé approximants	537
7.12	Review exercises (1–25)	539

Chapter 8	**Differentiation and Integration**	**543**
8.1	Introduction	544
8.2	Differentiation	545
	8.2.1 Rates of change	545
	8.2.2 Definition of a derivative	546
	8.2.3 Interpretation as the slope of a tangent	548
	8.2.4 Differentiable functions	550
	8.2.5 Speed, velocity and acceleration	551
	8.2.6 Exercises (1–7)	552
	8.2.7 Mathematical modelling using derivatives	553
	8.2.8 Exercises (8–18)	560

8.3 Techniques of differentiation 561

8.3.1 Basic rules of differentiation 562
8.3.2 Derivative of x^r 564
8.3.3 Differentiation of polynomial functions 568
8.3.4 Differentiation of rational functions 570
8.3.5 Exercises (19–25) 572
8.3.6 Differentiation of composite functions 573
8.3.7 Differentiation of inverse functions 577
8.3.8 Exercises (26–33) 579
8.3.9 Differentiation of circular functions 580
8.3.10 Extended form of the chain rule 584
8.3.11 Exercises (34–37) 586
8.3.12 Differentiation of exponential and related functions 586
8.3.13 Exercises (38–46) 591
8.3.14 Parametric and implicit differentiation 591
8.3.15 Exercises (47–59) 596

8.4 Higher derivatives 597

8.4.1 The second derivative 597
8.4.2 Exercises (60–72) 601
8.4.3 Curvature of plane curves 602
8.4.4 Exercises (73–78) 605

8.5 Applications to optimization problems 605

8.5.1 Optimal values 605
8.5.2 Exercises (79–88) 616

8.6 Numerical differentiation 618

8.6.1 The chord approximation 618
8.6.2 Exercises (89–93) 620

8.7 Integration 620

8.7.1 Basic ideas and definitions 620
8.7.2 Mathematical modelling using integration 624
8.7.3 Exercises (94–102) 628
8.7.4 Definite and indefinite integrals 628
8.7.5 The Fundamental Theorem of Calculus 631
8.7.6 Exercise (103) 633

8.8 Techniques of integration 633

8.8.1 Integration as antiderivative 634
8.8.2 Integration of piecewise-continuous functions 642
8.8.3 Exercises (104–109) 645
8.8.4 Integration by parts 646
8.8.5 Exercises (110–111) 649

8.8.6 Integration using the general composite rule 649
8.8.7 Exercises (112–116) 650
8.8.8 Integration using partial fractions 651
8.8.9 Exercises (117–118) 654
8.8.10 Integration involving the circular and hyperbolic functions 654
8.8.11 Exercises (119–120) 656
8.8.12 Integration by substitution 656
8.8.13 Integration involving $\sqrt{(ax^2 + bx + c)}$ 661
8.8.14 Exercises (121–126) 664

8.9 Applications of integration 665

8.9.1 Volume of a solid of revolution 665
8.9.2 Centroid of a plane area 666
8.9.3 Centre of gravity of a solid of revolution 668
8.9.4 Mean values 668
8.9.5 Root mean square values 669
8.9.6 Arclength and surface area 669
8.9.7 Moments of inertia 677
8.9.8 Exercises (127–136) 678

8.10 Numerical evaluation of integrals 679

8.10.1 The trapezium rule 679
8.10.2 Simpson's rule 685
8.10.3 Exercises (137–142) 688

8.11 Engineering application: design of prismatic channels 689

8.12 Engineering application: harmonic analysis of periodic functions 691

8.13 Review exercises (1–39) 693

Chapter 9 Further Calculus 701

9.1 Introduction 702

9.2 Improper integrals 702

9.2.1 Integrand with an infinite discontinuity 703
9.2.2 Infinite integrals 706
9.2.3 Exercise (1) 707

9.3 Some theorems with applications to numerical methods 708

9.3.1 Rolle's theorem and the first mean value theorems 708
9.3.2 Convergence of iterative schemes 711
9.3.3 Exercises (2–7) 715

9.4 Taylor's theorem and related results 715

9.4.1 Taylor polynomials and Taylor's theorem 715
9.4.2 Taylor and Maclaurin series 718
9.4.3 L'Hôpital's rule 723
9.4.4 Exercises (8–20) 724
9.4.5 Interpolation revisited 725
9.4.6 Exercises (21–23) 726
9.4.7 The convergence of iterations revisited 727
9.4.8 Newton–Raphson procedure 728
9.4.9 Optimization revisited 731
9.4.10 Exercises (24–27) 731
9.4.11 Numerical integration 731
9.4.12 Exercises (28–31) 733

9.5 Calculus of vectors 734

9.5.1 Differentiation and integration of vectors 734
9.5.2 Exercises (32–36) 736

9.6 Functions of several variables 737

9.6.1 Representation of functions of two variables 737
9.6.2 Partial derivatives 739
9.6.3 Directional derivatives 744
9.6.4 Exercises (37–46) 747
9.6.5 The chain rule 748
9.6.6 Exercises (47–56) 752
9.6.7 Successive differentiation 753
9.6.8 Exercises (57–67) 756
9.6.9 The total differential and small errors 757
9.6.10 Exercises (68–75) 760
9.6.11 Exact differentials 761
9.6.12 Exercises (76–78) 763

9.7 Taylor's theorem for functions of two variables 763

9.7.1 Taylor's theorem 764
9.7.2 Optimization of unconstrained functions 766
9.7.3 Exercises (79–87) 772
9.7.4 Optimization of constrained functions 773
9.7.5 Exercises (88–93) 778

9.8	Engineering application: deflection of a built-in column	779
9.9	Engineering application: streamlines in fluid dynamics	781
9.10	Review exercises (1–35)	784

Chapter 10 Introduction to Ordinary Differential Equations 789

10.1	Introduction	790
10.2	Engineering examples	790
	10.2.1 The take-off run of an aircraft	790
	10.2.2 Domestic hot-water supply	792
	10.2.3 Hydro-electric power generation	793
	10.2.4 Simple electrical circuits	794
10.3	The classification of ordinary differential equations	795
	10.3.1 Independent and dependent variables	796
	10.3.2 The order of a differential equation	796
	10.3.3 Linear and nonlinear differential equations	797
	10.3.4 Homogeneous and nonhomogeneous equations	798
	10.3.5 Exercises (1–2)	799
10.4	Solving differential equations	799
	10.4.1 Solution by inspection	800
	10.4.2 General and particular solutions	801
	10.4.3 Boundary and initial conditions	802
	10.4.4 Analytical and numerical solution	804
	10.4.5 Exercises (3–6)	805
10.5	First-order ordinary differential equations	806
	10.5.1 A geometrical perspective	807
	10.5.2 Exercises (7–10)	809
	10.5.3 Solution of separable differential equations	809
	10.5.4 Exercises (11–17)	811
	10.5.5 Solution of differential equations of $\frac{dx}{dt} = f\left(\frac{x}{t}\right)$ form	812
	10.5.6 Exercises (18–22)	814
	10.5.7 Solution of exact differential equations	814
	10.5.8 Exercises (23–30)	817
	10.5.9 Solution of linear differential equations	818

	10.5.10 Solution of the Bernoulli differential equations	822
	10.5.11 Exercises (31–38)	824
10.6	Numerical solution of first-order ordinary differential equations	825
	10.6.1 A simple solution method: Euler's method	826
	10.6.2 Analysing Euler's method	828
	10.6.3 Using numerical methods to solve engineering problems	830
	10.6.4 Exercises (39–45)	833
10.7	Engineering application: analysis of damper performance	834
10.8	Linear differential equations	839
	10.8.1 Differential operators	839
	10.8.2 Linear differential equations	841
	10.8.3 Exercises (46–54)	849
10.9	Linear constant-coefficient differential equations	851
	10.9.1 Linear homogeneous constant-coefficient equations	851
	10.9.2 Exercises (55–61)	856
	10.9.3 Linear nonhomogeneous constant-coefficient equations	857
	10.9.4 Exercises (62–65)	863
10.10	Engineering application: second-order linear constant-coefficient differential equations	864
	10.10.1 Free oscillations of elastic systems	864
	10.10.2 Free oscillations of damped elastic systems	868
	10.10.3 Forced oscillations of elastic systems	871
	10.10.4 Oscillations in electrical circuits	875
	10.10.5 Exercises (66–73)	876
10.11	Numerical solution of second- and higher-order differential equations	878
	10.11.1 Numerical solution of coupled first-order equations	878
	10.11.2 State-space representation of higher-order systems	881
	10.11.3 Exercises (74–79)	883
10.12	Qualitative analysis of second-order differential equations	885
	10.12.1 Phase-plane plots	885
	10.12.2 Exercises (80–81)	889
10.13	Review exercises (1–35)	890

Chapter 11 Introduction to Laplace Transforms 897

11.1 Introduction 898

11.2 The Laplace transform 900

11.2.1 Definition and notation 900
11.2.2 Transforms of simple functions 902
11.2.3 Existence of the Laplace transform 905
11.2.4 Properties of the Laplace transform 907
11.2.5 Table of Laplace transforms 914
11.2.6 Exercises (1–3) 915
11.2.7 The inverse transform 915
11.2.8 Evaluation of inverse transforms 916
11.2.9 Inversion using the first shift theorem 918
11.2.10 Exercise (4) 920

11.3 Solution of differential equations 920

11.3.1 Transforms of derivatives 920
11.3.2 Transforms of integrals 922
11.3.3 Ordinary differential equations 923
11.3.4 Exercise (5) 928
11.3.5 Simultaneous differential equations 929
11.3.6 Exercise (6) 931

11.4 Engineering applications: electrical circuits and mechanical vibrations 932

11.4.1 Electrical circuits 932
11.4.2 Mechanical vibrations 937
11.4.3 Exercises (7–12) 941

11.5 Review exercises (1–18) 942

Chapter 12 Introduction to Fourier Series 946

12.1 Introduction 947

12.2 Fourier series expansion 948

12.2.1 Periodic functions 948
12.2.2 Fourier's theorem 949
12.2.3 The Fourier coefficients 950
12.2.4 Functions of period 2π 953
12.2.5 Even and odd functions 959

12.2.6 Even and odd harmonics 963
12.2.7 Linearity property 965
12.2.8 Convergence of the Fourier series 966
12.2.9 Exercises (1–7) 970
12.2.10 Functions of period T 971
12.2.11 Exercises (8–13) 974

12.3 Functions defined over a finite interval 974

12.3.1 Full-range series 974
12.3.2 Half-range cosine and sine series 976
12.3.3 Exercises (14–23) 980

12.4 Differentiation and integration of Fourier series 981

12.4.1 Integration of a Fourier series 982
12.4.2 Differentiation of a Fourier series 984
12.4.3 Exercises (24–26) 986

12.5 Engineering application: analysis of a slider–crank mechanism 987

12.6 Review exercises (1–21) 990

Chapter 13 Data Handling and Probability Theory 993

13.1 Introduction 994

13.2 The raw material of statistics 995

13.2.1 Experiments and sampling 995
13.2.2 Data types 995
13.2.3 Graphs for qualitative data 996
13.2.4 Histograms of quantitative data 999
13.2.5 Alternative types of plot for quantitative data 1005
13.2.6 Exercises (1–5) 1008

13.3 Probabilities of random events 1009

13.3.1 Interpretations of probability 1009
13.3.2 Sample space and events 1009
13.3.3 Axioms of probability 1010
13.3.4 Conditional probability 1012
13.3.5 Independence 1016
13.3.6 Exercises (6–23) 1020

13.4 Random variables 1022

13.4.1 Introduction and definition 1022
13.4.2 Discrete random variables 1022
13.4.3 Continuous random variables 1024
13.4.4 Properties of density and distribution functions 1025
13.4.5 Exercises (24–31) 1028
13.4.6 Measures of location and dispersion 1028
13.4.7 Expected values 1032
13.4.8 Independence of random variables 1033
13.4.9 Scaling and adding random variables 1034
13.4.10 Measures from sample data 1037
13.4.11 Exercises (32–48) 1042

13.5 Important practical distributions 1043

13.5.1 The binomial distribution 1044
13.5.2 The Poisson distribution 1046
13.5.3 The normal distribution 1049
13.5.4 The central limit theorem 1053
13.5.5 Normal approximation to the binomial 1056
13.5.6 Random variables for simulation 1057
13.5.7 Exercises (49–65) 1059

13.6 Engineering application: quality control 1061

13.6.1 Attribute control charts 1061
13.6.2 United States standard attribute charts 1064
13.6.3 Exercises (66–67) 1065

13.7 Engineering application: clustering of rare events 1065

13.7.1 Introduction 1065
13.7.2 Survey of near-misses between aircraft 1066
13.7.3 Exercises (68–69) 1067

13.8 Review exercises (1–13) 1068

Appendix I Tables 1070

AI.1 Some useful results 1070
AI.2 Trigonometric identities 1073

AI.3 Derivatives and integrals 1074
AI.4 Some useful standard integrals 1075

Answers to Exercises 1076
